

Project Overview

HandsMen Threads is a Salesforce CRM system designed for a men's fashion brand. The goal of this CRM is to help the business manage customers, products, orders, inventory, and marketing activities in one platform. It improves customer management, order tracking, inventory monitoring, and automated communication.

Objectives

The main objectives of this CRM project are:

- To organize customer information and order history.
 - To track fashion products and their inventory levels.
 - To automate important business processes like order confirmation and stock alerts.
 - To give the sales team secure access through roles, profiles, and permission sets.
 - To make business operations more efficient through reports, dashboards, flows, and Apex automation.
-

Phase 1: Requirement Analysis & Planning

1. Understanding Business Requirements

HandsMen Threads needs a system to manage:

- Customer profiles
- Fashion products
- Orders and order details
- Inventory levels
- Marketing campaigns
- Automatic notifications and email alerts

2. Project Scope & Objectives

The CRM will include:

- Custom Objects
- Custom Fields
- Validation Rules
- Automations (Flows, Email Alerts)

- Security setup
- Basic UI (Tabs and App)
- Reports & Dashboards
- Apex code for batch automation

3. Data Model & Security Model

Designed the following structure:

- HandsMen Customer
- HandsMen Product
- HandsMen Order
- Inventory
- Marketing Campaign

Security setup includes:

- Profiles
- Roles
- Permission Sets
- Field-Level Security

4. Stakeholder Mapping

Main users:

- Sales Team
- Inventory Manager
- Admin/Super Admin

5. Execution Roadmap

- Phase 2: Development
- Phase 3: UI/UX
- Phase 4: Testing
- Phase 5: Deployment

Phase 2: Salesforce Development – Backend & Configurations

1. Environment Setup

- Created Salesforce Developer Account
- Verified email and logged in
- Set up App Manager for a dedicated workspace

2. Custom Objects Created

- HandsMen Customer
- HandsMen Product
- HandsMen Order
- Inventory
- Marketing Campaign

3. Fields Created

- Email
- Phone
- Loyalty Status
- Price, Quantity, Total Price (Formula)
- Lookup Relationships (Product ↔ Order, Customer ↔ Order)

4. Validation Rules

Examples:

- Quantity > 0
- Price must not be blank or negative
- Order Date cannot be in the future

5. Automations

- Workflow Email Alerts
- Record-Triggered Flows
- Scheduled Flows

6. Apex Classes & Batch Apex

- Created an Apex Batch class to check low inventory
- Scheduled Apex to run daily

7. Screenshots

(All configuration screenshots must be added in the final file.)

Phase 3: UI/UX Development & Customization

1. App Manager Setup

Created the **HandsMen Threads** Lightning App and added:

- Customer
- Product
- Order
- Inventory
- Campaign

2. Page Layouts & Forms

- Customized page layouts for each object
- Added sections for contact details, product details, order totals

3. User Management

Created users:

- **Niklaus**
 - **Kol**
- Assigned profiles and roles.

4. Reports & Dashboards

Created:

- Sales by Product
- Orders by Status
- Low Inventory Report
- Inventory Overview Dashboard

5. Lightning Pages

Customized record pages to improve readability and navigation.

6. LWC Development (Optional)

Not required for this version.

7. Screenshots

(All UI screenshots required.)

Phase 4: Data Migration, Testing & Security

1. Data Migration

Used **Data Import Wizard** to load:

- Customer data
- Product data

Used **Data Loader** for larger datasets like inventory.

2. Security Setup

Configured:

- Roles and Role Hierarchy
- Profiles (Sales Profile)
- Permission Sets (Permission_Platform_1)
- Sharing Rules for controlled access
- Field History Tracking (Price, Stock Level)
- Duplicate & Matching Rules for Email or Phone

3. Testing

Prepared **test cases** for:

- Order creation
- Email Alerts
- Stock Alert Flow
- Approval or Validation Rules
- Batch Apex

Each test case includes:

- Input screenshot
- Output screenshot
- Result (Pass/Fail)

4. Test Classes

Created Apex Test Classes to validate automation logic.

Phase 5: Deployment, Documentation & Maintenance

1. Deployment Strategy

Used:

- Change Sets (Outbound → Inbound)
To move components from sandbox to production.

2. Maintenance Plan

- Regular checking of flows
- Checking inventory batch jobs
- Updating profiles and permissions if new users join
- Monitoring error logs

3. Troubleshooting Approach

- Use Debug Logs for Apex errors
 - Use Flow Debugger for automation issues
 - Review Setup Audit Trail
-

Conclusion

The HandsMen Threads Salesforce CRM successfully centralizes customer, product, order, and inventory management into one streamlined system. It improves team efficiency, reduces manual work, and ensures accurate and automated business operations. With its secure access layers, automations, reports, and dashboards, the CRM supports the company's goal of delivering a sophisticated and elevated men's fashion experience.

Future Enhancements

- Add Chatbot for customer support
- Add AI-based product recommendations
- Add Loyalty Points calculation
- Integrate payment gateway
- Mobile App through Salesforce Mobile Publisher
